DELETERIOUS HEALTH EFFECTS ARE UNDENIABLE

Abstract: In the Real World: Adverse Health Effects Related to Industrial Wind Turbines – Controlled Studies at Mars Hill and Vinalhaven, Maine

Following reports of adverse health complaints among residents of Mars Hill, Maine, a pilot study was undertaken to provide information to the Public Health Subcommittee of the Maine Medical Association in the first half of 2009. This represented the world’s first controlled study of adverse health effects related to industrial wind turbines. Adverse effects are real, and significant. The findings from this pilot study will be discussed. Since the pilot study was completed, a larger, more detailed and standardized controlled study has been undertaken at Mars Hill and Vinalhaven, Maine, utilizing validated questionnaires. Preliminary findings from these will be presented.
